Navvy SmartSets

Quick Start Guide

SmartSets

What are SmartSets?
SmartSets are a new way to provide personalized, "set it and forget it" practice opportunities in Navvy. Each student receives practice sets that are tailored to their specific learning needs.

Items are selected based on…

- Performance on Competency & Practice
- Learning Map Relationships
- Recency of Practice
- Teacher Settings

3 Types of Instructional Intent for SmartSets

Develop — Target standards where students have attempted but not yet reached competency.

Strengthen — Target standards where students have achieved competency but may need reinforcement.

Explore — Target standards where students have not yet attempted competency.

3 Ways to Administer SmartSets

Autonomous SmartSets

student-initiated practice sets launched from a specific standard

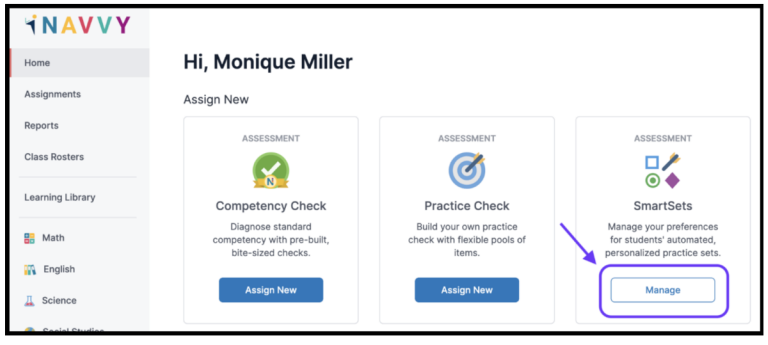
SmartSets Pathways

always-on, continuously refreshed sequence of tailored practice for each student

Targeted SmartSets

teacher-assigned, personalized practice checks

Teachers can manage **Autonomous** and **Pathways SmartSets** from the home screen by clicking ***Manage*** under SmartSets . Students would then access them from their portals.



3 options on the next screen

Pathways

Manage Pathways

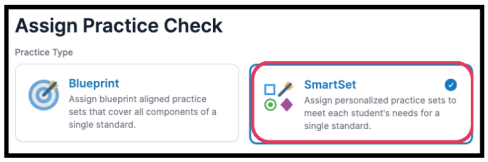
Manage Autonomy

Pathways: view each student's prioritized learning sequence. Each pathway is personalized to each student; therefore, each student will have a different mix of Develop, Strengthen, and Explore smartsets according to their individual learning needs. This updates and refreshes in real time.

Manage Pathways & Manage Autonomy:

- Set daily limits
- Set preferences for each instructional intent
  - Such as # of items, # of standards, % of standards from different grade levels, what students see after submission
- Student Access preferences
  - can be set individually or for a whole class

To create **Targeted SmartSets**, go to ***Practice Checks*** from the home screen and then click SmartSets within the Practice Check .



Select One Standard & set your preferences for each instructional intent.

- The max total number of items per SmartSet.
- The max percent of items that should come from predecessor or successor standards
- Whether off-grade predecessor or successor items are allowed
- What students see after submitting an answer
